

—○— Top-K mean ensemble   
 ● K=4   
 ■ K=4 ±1 bootstrap SD   
 ★ Observed task peak   
 ■ K=12 deployed mean

The observed task-specific peak lies within the K=4 +1 bootstrap SD limit for 12/12 endpoints. Bands quantify development-set compound-resampling variability at K=4; ranking AUPRC is descriptive and was not used to select the deployed model.
