

# Stage 1: top-K ensemble AUPRC vs. ensemble size K (K=1..12, fixed seed=1)

Y-axes are independent per panel (task prevalence differs; raw AUPRC is not comparable across tasks -- see METHODS.md).  
 Ranking for top-K membership and AUPRC values both computed on the frozen Stage-1 test partition (n=204-347), single seed=1, no cross-task or cross-seed averaging.
